

Brainstorming & Idea Prioritization Template

Date	02 July 2026
Team ID	CCAP-01
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Data Engineer	Merge application_record.csv and credit_record.csv on ID and build a clean, unified applicant dataset.	Data Collection	1
2	Data Engineer	Convert the multi-class repayment status (0-5, C, X) into a binary Approved / Rejected target label.	Data Preparation	1
3	Data Scientist	Perform EDA to understand feature distributions, missing values, and correlation with approval outcome.	Analysis	2
4	Data Scientist	Train and compare multiple models: Logistic Regression, Decision Tree, Random Forest, XGBoost, SVM, KNN, Naive Bayes, Gradient Boosting.	Model Building	2
5	ML Engineer	Save the best-performing model with Joblib along with the preprocessor and metadata for reuse.	Model Deployment	3
6	Full-Stack Developer	Build a Flask web app with single and batch (CSV) prediction, prediction history, and PDF/Excel report download.	Application Development	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Build a unified, cleaned dataset with a binary approval target derived from repayment history.	High	High	1	Yes
2	Perform EDA and train/compare multiple classification models to select the best-performing one.	High	High	2	Yes
3	Deploy the saved model in a Flask web app with single/batch prediction, history, and report downloads.	Medium	High	3	Yes
