

Project Demo Planning

Date	02 July 2026
Team ID	CCAP-01
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Introduce the team and explain the credit card approval risk problem: banks need a consistent way to screen applicants as low-risk or high-risk.	2	Team Lead
2	Solution Overview	Walk through the end-to-end pipeline: dataset merge, target creation from repayment status, preprocessing/feature engineering, model comparison, and the Flask app architecture.	3	ML Engineer
3	Live Demo: Single Applicant Prediction	Submit a strong applicant profile and a risky profile through the prediction form and show the Approved / Rejected result with approval probability.	4	Backend Developer
4	Live Demo: Batch CSV Prediction	Upload a sample CSV of multiple applicants on the batch prediction page and show the batch results output.	3	Backend Developer
5	Model Report & Prediction History	Show the model comparison report, evaluation metrics (accuracy, precision, recall, F1, ROC-AUC), and the prediction history page with PDF/Excel download.	3	Data Scientist
6	Q&A Session	Open the floor for questions from mentors/evaluators on model performance, dataset limitations, and future improvements.	5	Team Lead

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the credit approval risk problem and the target users: bank analysts and mentors reviewing the project.
2	Solution Overview	Describe the ML pipeline (preprocessing, model comparison, best model selection) and the Flask web app architecture.
3	Live Feature Demonstration	Demonstrate single applicant prediction, batch CSV prediction, model report, and prediction history with downloads.
4	Q&A Session	Address questions on model performance, dataset limitations, and next steps for production readiness.
